Product Description

Cyan, Magenta, Yellow & Black Pigment Solutions. Use the CMYK pigment set to create custom colours. Before each use, shake well. Drip the pigment solution into Liquid Models 3D resin slowly and mix until the desired colour is achieved. Pigments added in excess can result in slower curing times and even prevent the cure completely. You can add the pigment solution to our white resin or to our clear resin depending on the finish you wish to achieve. When added to white resin, the result will be an opaque finish. When added to clear resin, the result will be transparent. The more pigment you add to the resin, the more solid the colour will be. Taking care with the pigments is extremely important, as they will stain easily. It is always recommended to read and understand the safety and technical information before using particle dispersions. **Package contents:**

- 1 x 30g Cyan Pigment
 - 1 x 30g Magenta Pigment
 - 1 x 30g Yellow Pigment
 - 1 x 30g Black Pigment
 - 4 x dropper lids
-
