SKU: 3DWO3T8N55ZUE

Price: 4,699.00 DH

Stock: instock

Categories: [Professional Resins](#)

Product Description

Formulated by Legor® Group, this basic yellow casting alloy delivers bright, oxidation-free castings with a light yellow color in 18-karat gold and exceptional fluidity. Additives generally include lower amounts of silver and higher amounts of zinc and silicon. A master alloy casting grain is a pre-formulated mix of base-metal elements; add the appropriate amount of precious metal grain to the master alloy to create the casting alloy you need.

Attributes

- Form: Alloying grain
- Metal Color: Yellow
- Brand: Legor Group
- Country of Origin: Italy

Additional

Karat: 18 System: open Anti-oxidant: yes Grain refiner: medium

Features & Maintenance

• The color will depend on the karat value of the grain you create; this master alloy provides a rich yellow color for 14-karat alloys. When used to create lower karat values, the color will be paler. • For more information regarding the use or composition of this material, please refer to the reference sheet provided below.
