Introducing 3DMakerpro Eagle

Eagle is 3DMakerpro's high-performance spatial scanner, combining high precision, wide coverage, and user-friendly operation. Designed for professionals seeking efficiency and accuracy, Eagle offers an end-to-end solution from data acquisition to 3D production, enabling large-scale 3D scene modeling within minutes. Whether for architectural surveying, film production, or virtual exhibitions, Eagle streamlines the entire process into a one-stop experience.

On-Site Review Operations

Equipped with a 3.5-inch screen, Eagle offers three real-time display modes during data collection: point cloud, photos, or split-screen point cloud/photos. After collection, users can

instantly review point cloud projects, GPS trajectories, and photos.

Adaptable to Various Platforms and Vehicles

Eagle collects up to 200,000 points per second, maintaining data quality even at speeds of 20km/h, meeting the needs of dynamic operations across various vehicles.

Platform and Software

Whether it’s architectural surveying, film production, or virtual exhibitions, Eagle’s workflow and companion software ensure a seamless experience from point cloud capture to final presentation.
